

Claim Insurance Agent – Topics, Actions & Purposes

1. Get Claim Status

Purpose: Helps members or providers check the real-time status of a submitted claim. Reduces inbound calls and provides transparency.

Actions:

- ClaimStatusLookup (Flow): Retrieves claim details using Claim ID and Email. Returns status, provider name, service date, and billed/paid amounts.
- ReturnDenialCode (Flow): Adds denial code if claim is denied, for further explanation.

2. Explain Denial Reason

Purpose: Explains claim denial reasons in clear, member-friendly language, avoiding technical codes. Helps reduce appeal costs and call volumes.

Actions:

- ExplainDenialReason (Prompt Template): Translates denial codes (e.g., CO-50, PR-96) into human-readable explanations.
- DenialKnowledgeLookup (Flow): Retrieves denial reason descriptions from Denial Code object or Knowledge Articles.

3. Estimate Reimbursement Timeline

Purpose: Provides members with an estimated reimbursement date based on claim type, provider, and historical averages. Builds confidence and reduces repeat inquiries.

Actions:

- ReimbursementEstimator (Prompt Template): Generates estimated timeline (e.g., 2–4 weeks) using mock/historical data.
- ProcessingTimeLookup (Flow): Cross-checks payer processing timelines for claim category.

4. Appeals & Escalation

Purpose: Guides members through filing an appeal when a claim is denied. Automates data capture and routes cases to the appeals team.

Actions:

- AppealCaseCreation (Flow): Creates an appeal case with denial reason, claim details, and member contact.
- EscalateToSupport (Flow): Routes unresolved or complex appeals to back-office teams via Omni-Channel.

5. Duplicate Claim Detection

Purpose: Prevents unnecessary re-submission of claims by detecting duplicates and informing users.

Actions:

- CheckDuplicateClaims (Flow / Apex): Verifies if a claim with same member, date of service, and provider already exists. Returns duplicate warning.

6. Check Support Case Status

Purpose: Allows members to check the progress of previously created support cases (appeals, escalations, general claim inquiries).

Actions:

- CaseStatusLookup (Flow): Searches by CaseReference ID (e.g., CLM-SUP-20255-1329) and returns latest status update.

7. Eligibility & Benefits (Optional Extension)

Purpose: Expands agent capability to check member coverage, eligibility, and benefits before or alongside claim inquiry.

Actions:

- EligibilityCheck (Flow): Verifies if member was active and covered on Date of Service.
- BenefitSummary (Prompt Template): Summarizes covered vs. non-covered services for transparency.

8. Connect with Support (Fallback)

Purpose: Provides a safety net when the bot cannot resolve the issue. Ensures smooth transition to a live agent while capturing context.

Actions:

- EscalateCaseCreation (Flow): Logs intent, captures transcript, and escalates to support.
- AgentHandoff (Omni-Channel): Routes to a live service agent if automation fails.
